Our community believe children thrive in an inclusive, interesting and safe environment. As educators we encourage each child to learn through playing, exploring, creating, investigating and communicating. Every child is encouraged to develop positive relationships with other children and educators. We intentionally teach numeracy, literacy and science in exciting and fun ways in our education program and educators plan for this learning. Our children are nurtured in mind, body and spirit and we take care to ensure safety and protection. Educators support all children to take calculated risks, increasing wellbeing, engagement and readiness to learn. Family involvement in all aspects of the kindergarten helps promote children’s sense of belonging and is highly valued. At our kindergarten we have strong relationships within our community that support children (from birth to school), staff and families through connections with our neighbours, local businesses, government and Playgroup. We make a positive difference to our world by learning about, and caring for, ourselves, each other and our earth.
